

Moving

Our more inclusive, assessable version of the traditional seesaw can be used in a variety of ways, allowing the user to define their own play experience.

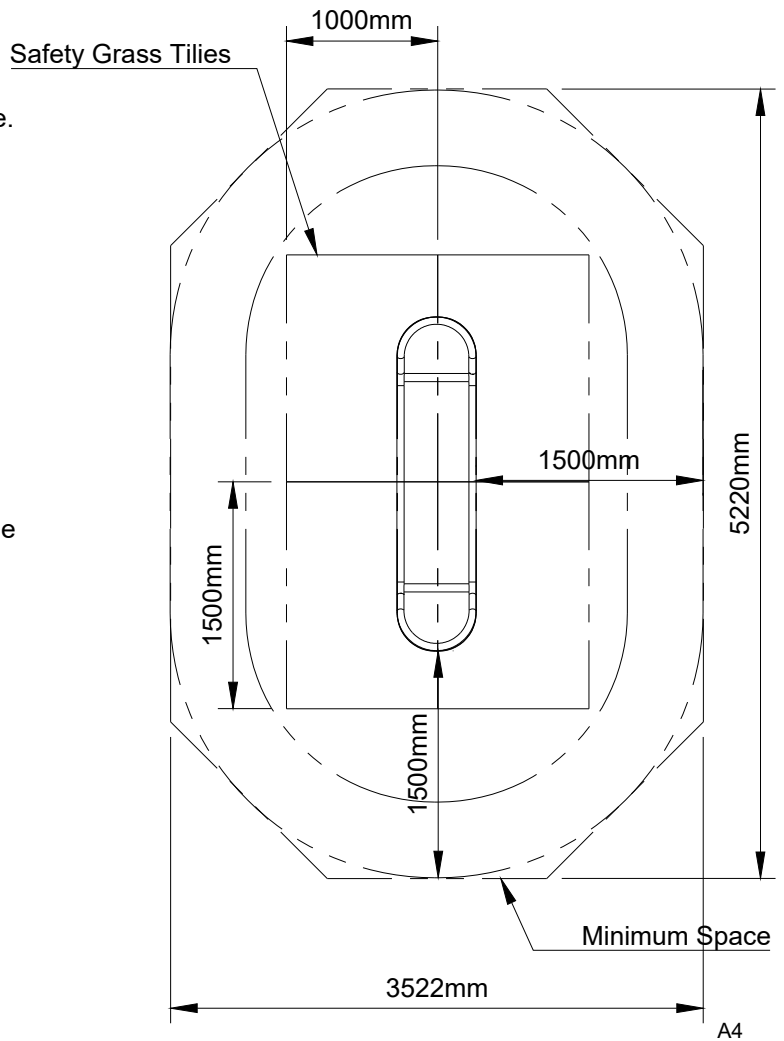

The IP16 Surfboard provides a smooth rocking motion its unique design prevents either end from hitting the ground, making the play experience a lot gentler than traditional seesaw.

Designed at wheelchair transfer height a child can easily move onto the Surfboard where possible and the surface area is spacious enough for several children to sit or stand together.

The upturned arm allows the user to sit or lie supported on the surface which is beneficial for those who require some extra postural support, whilst the wide surface is covered in porous rubber ensuring users feel safe and secure while standing.

Scale: 1:50

Activities	.. Rocking, balance, seating, social, supportive
Features	.. Upturned arms, rubber wetpour surface.
Age Range	.. 2 to 12 years
No. of Users	.. 2+
Falling Space	.. 16.7m ²
FFH	.. 1m
Materials	.. Galvanised powdercoated steel and wetpour
Approx. Weight	.. 160kg
Concrete Volume	.. 0.6m ³
